h. Key to attached sketch:

- 1) Fence surrounding the planned paper complex by wire fence.
- 2) Branch-line: from the original railroad branch-line, which led to the old Sugar Mill from the Stati RR-station, a new branch-line was built which branches off at the bend and leads to the planned complex. Inside the plant's area tracks lead to each hall.
- 3) Fine paper production halls A ferre-concrete hall of an approx. 25X1 length 120 meters. The machinery and the assemblying completed at the end of 1955. 25X1
- h) Poiler houses On the southeastern tip of the planned papercomplex is a ferro-concrete boiler hause with adjoining chimney of about 50 meters height.
- 5) Administration building: By the plant's entrance are two buildings. The north building is 2-storied, approx. 50 x 20 meters housing temporarily offices of the Prunstav. The second building is h-storied, approx. 60 x 30 meters, housing technical and administrative offices.
- 6) Nood-cutting hall: A ferro-concrete hall, approx. 100 x 100 meters situated on the northeastern tip of the plant's area.

 In April 1956, new machinery began to be installed

 25X1

 In addition to the above listed building there are several halls under construction as well as stores and buildings
